

## Polyurethane Foam Code Approval

- Building codes provide for the use of polyurethane spray foam in the “Foam Plastic Section” of the code. This section of the code also describes the use of thermal barriers.
- Even though the three major code organizations (**BOCA, ICBO, SBCCI**) have all been consolidated into a single building code organization (**ICC**), most local inspection agencies use building codes that are several years old. The following table identifies the applicable code and approval sections for polyurethane foam.

<b>Code Body</b>	<b>Approval Section</b>
International Conference of Building Officials (ICBO)	4202 1717
Southern Building Code Congress International (SBCCI)	704.2 876.5
Building Officials and Code Administrators Int'l (BOCA)	717
